Job Details

Position: Full-Stack Developer

Location: Burbank, CA / Atlanta, GA (Hybrid)

Duration: 8 Months

The Role:

- We're looking for a creative and motivated full-stack developer with strong analytical and problem-solving skills. You'll build and maintain robust, scalable enterprise products while working with a team that values innovation and continuous improvement. The successful candidate will demonstrate exceptional ingenuity in developing effective solutions, a commitment to hands-on exploration, and resilience in overcoming challenges. They will leverage available resources creatively, question traditional methodologies to optimize outcomes, and contribute to a collaborative environment by sharing insights and fostering continuous improvement.

Job Responsibilities:

Design & development:

- Build end-to-end software solutions using modern programming languages and frameworks.
- Architect scalable, robust systems with a focus on long-term maintainability and performance.
- Drive the full software development lifecycle from initial concept and rapid prototyping to production deployment and continuous improvement.

Collaboration:

- Work closely with cross-functional pods to understand challenges and problem solve technology-driven solutions, often working with uncertainty and/or partial information.

- Embrace agile practices by iteratively refining user stories through collaboration with product owners, designers and data scientists to ensure that every release delivers on business user expectations.
- Actively engage in discussions to break down user stories into meaningful, value-driven slices that reflect true end-to-end functionality.
- Drive continuous improvement of our engineering practices to ensure that every release meets high quality standards.

Quality & performance:

- Write clean, efficient, and well-documented code with a strong emphasis on automated testing and continuous integration.
- Monitor system performance, troubleshoot issues, and implement enhancements to ensure optimal performance.
- Maintain and improve existing codebases, applying modern practices and tools to enhance functionality and security.

Continuous learning:

- This developer embraces a continuous learning mindset mastering AWS serverless, modern front-end frameworks, data analytics, and DevOps best practices while actively engaging in agile collaboration and adaptable, proactive problem-solving.

Must Have Skills:**Proficient in Java, Python, JavaScript/TypeScript, or Node.js**

- 5+ years of experience.

Front-end Framework and Design Hand-off Tool experience

- 5+ years of experience. Front-End examples: React, Angular, or Vue.js. Design Hand-off Tool example: Figma Inspect.

Deep expertise in back-end frameworks

- 5+ years of experience. Example framework: (e.g. Spring Boot). Looking for those who focus on developing modular, maintainable microservices that interact via event-driven architectures (using AWS Lambda, SQS, Fargate, etc.)

Nice to Have Skills:

- Experience with Waterfall methodologies.

Soft Skills:

- Solid understanding of agile development methodologies and software engineering best practices.
- Excellent problem-solving skills and the ability to work collaboratively in diverse, cross-functional teams.

Education / Certifications:

- Bachelor's or master's degree in computer science, engineering, related technical field or related work experience.
